

## *Press Release*

### **Pretioso and April System Design join forces and bring DynaPass OTP solutions to the German-speaking market as datomo Mobile Password**

**Stockholm, April 19 2010, The Swedish security software company April System Design today announced a new partnership with Pretioso, a leading distributor and independent systems house for mobile applications in the German-speaking market.**

April introduced their patent protected one-time password solution DynaPass in 2000. Due to ease of installation and use, their SMS based two factor authentication solution is used to secure enterprise network access and online services in Europe, Middle East and the US.

Pretioso has added DynaPass to their successful datomo product family under the name datomo mobile password, which is launched at the Hannover Messe 2010.

Going from static to dynamic passwords is a quick way to drastically increase security in any private network or online service. Such solutions often include a token device, are typically expensive to install and manage and require users to carry on yet another thing. The Red Herring Global award winner DynaPass is a robust solution using SMS/TEXT on standard cell phones, quick to install since no software is needed on the phone and exceptionally easy to manage and use. It's a highly affordable way to get the advantages of dynamic or one-time passwords.

"datomo Mobile Password is a great authentication solution for mobile workers", says Mr Klaus Düll, CEO at Pretioso. "An easy to install and use strong authentication solution is exactly what our clients are asking for", concludes Mr Düll.

"Pretioso is a perfect partner to April System Design in the German-speaking market" says Mr Björn Karlsson, CEO at April System Design. "Their expertise, business relationships and strong datomo brand together with DynaPass makes a very attractive and competitive solution", continues Mr Karlsson.

Pretioso introduce datomo® mobile password at Hannover Messe 2010, April 19-23, in Halle 2 C60/2.
